

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

**Cory's List of the Birds of Eastern North America.**<sup>1</sup>—This "list includes all birds which are known to occur in North America east of the ninetieth meridian." It is very slightly annotated with reference "to species which occur in New England, Illinois, and Florida. Taking these States to form the points of an imaginary triangle, a somewhat crude idea of the range of species which occur within this area may be obtained," etc. The annotations generally consist of the use of the abbreviations "N. E.," "Fla.," and "Ill.," one or all, as the case may require except in the case of species of casual or accidental occurrence, when the nature of their presence is indicated. The 'List' includes 570 species and subspecies, the nomenclature and arrangement being that of the A. O. U. Check-List; the species are numbered consecutively, the equivalent numbers of the A. O. U. Check-List being added in parenthesis. Of the 570 species listed, 104, or about 18 per cent, are of casual or accidental occurrence. Among the Water Birds (Grebes to Grouse), the casuals are largely (more than one half) stragglers from the Old World; the rest are about equally from the West and from the West Indies and other parts of the tropics. It may be noted that No. 431, *Junco hyemalis oregonus*, is doubtless the same as No. 432, *Junco h. shufeldti* (= *connectens*).—J. A. A.

**Schalow's the Published Writings of Anton Reichenow.**<sup>2</sup>—This is a convenient list of the published writings of this eminent ornithologist, arranged chronologically, and numbering 288 titles. The list of titles is followed by a list of the new generic names, proposed by Dr. Reichenow, which number 38, of which 15 are proposed to replace earlier 'barbarous' or improperly constructed names. Then follows a list of the species described as new, numbering 342, and finally a list of the species named in honor of Dr. Reichenow, 17 in number. Dr. Reichenow's papers relate mainly to African birds, but include many of a more general character, and several special works of much importance.—J. A. A.
